The Astronaut Mindset, *Houston's* *Space Legacy,* and the Next Moonshot

Hello Tehilla,

As an influential member of the Emory community, you're invited to enjoy exclusive programs, conversations, and behind-the-scenes access to the ideas shaping our future. Today, I'm pleased to share a special recording of an exciting conversation on space exploration.

Featuring Emory experts and filmed in Houston — the city that has shaped human spaceflight for more than half a century — this discussion explores the human side of space exploration, the psychology of risk and resilience, what uniquely prepares astronauts for space missions, and what the next era of spaceflight may require of us all.

[WATCH THE CONVERSATION](#)

Featuring Emory alumni and faculty, this unique discussion showcases the depth of expertise and curiosity found across our community. The panel features Emory psychology professor Ken Carter 87Ox 89C, an expert in the psychology of risk and resilience; Charles Scott 82C 86M, a forensic psychiatrist who works closely with NASA on astronaut readiness; and Emory sociology professor Tracy L. Scott, director of The Moonshot Era Project and the daughter of Apollo 15 commander David Scott.

Whether you joined us for the virtual screening or are tuning in for the first time, we're excited to share this exclusive recording with you. As part of this community, you'll continue to receive access to select conversations, experiences, and insights from across Emory.

We're glad to have you with us.

Best,

Hanna Hope
